REDOMA[®]
SWEDEN

Leading Manufacturer of Cable Recycling Plants Worldwide.

Feeding a power cable into the stripper.

Technical Specification

Cable diameter	5 – 100 mm
Feeding speed	40 m/min
Stripping system	Double cutting by upper and lower knives
Motor	2.2 kW
Drive	Motor – gearbox – friction clutch
Weight	300 kg
Dimensions (L x W x H)	1.6 x 1.2 x 1.2 m

With reservation for technical alterations.

Plastic insulated aluminium cable is extremely easy to process.

Handling of lead covered cable is problem-free.

View from infeed side.

Easy stripping of lead covered telephone cable.

Cable Stripper "BEAVER"

By using unique springloaded feed rolls you no longer need to make fine adjustments for different cable sizes.

It is sufficient to make a rough adjustment only, and this you can do very easily by means of a handle. Just feed the cable and it will be stripped without any problems, whether the insulation is rubber, lead, paper, PVC or PE. Deformed lead cable which is flattened and crooked can be handled with no special preparation. The cutting depth is the only thing which needs to be adjusted to suit the insulation.

The machine is very robust – the only service needed is maintenance of the knives. However,

it does not normally handle armoured cable, only steel wire upto 0.5 mm diameter.

Due to this new and unique cable stripping design, whatever the condition of the cable, the job can be done very easily. You will save time and energy.
