Granulator with transport equipment.

Granulator GR75-650 "LION"

The Granulator GR75 ("LION") with its unique features are esteemed by professionals over the world.

It is a robust and reliable machine designed for tough operation and high capacity.

The GR75 is mostly used in the large REDOMA 2000 cable recycling plants. This granulator can be installed one or two or more in different combinations – in line and/or in parallel position – depending on the capacity required.

The "LION" is mounted on a steel base plate and does not require any special foundation. The machine design is unique, characterized by simplicity and ease of maintenance.

The granulator housing can be opened hydraulically for easy and quick access to knives and screen. Replacement of the screen is a only matter of a few minutes.

The knives are pre-adjusted in a jig outside the machine and replaced by means of an electric screw driver – small details, it might seem, but in reality saving you lots of time and at the same time maximizing the production. The granulator housing is equipped with exchangeable wear bars.

The "LION" – superior and proud. Simply the King of granulators!
